

# 128 x 128 L-band Harrier Matrix ultra compact, with configurable inputs & outputs

ETL's new ultra compact Harrier matrix provides routing for up to 128 input and output feeds, with integrated LNB powering in a 10U high chassis. The configurable design offers a range of input and output modules (IO modules) with features to suit specific RF needs for each satellite feed. The matrix can be expanded from 8x8 up to 128x128 in blocks of 8.

### Typical applications:

- Managing multiple inputs for growing satellite teleports
- Extended L-band frequency for Ka-band & HTS applications
- Routing live traffic to multiple modems

**Configurable** input and output modules with features to suit specific RF needs for each satellite feed, including fixed gain, variable gain, LNB powering & fibre inputs

## Module Options

### PASSIVE INPUT/OUTPUT

H-IO-01

- Passive input or output module (0 dB gain matrix)
- RF power sensing

### ACTIVE INPUT

H-IN-02

- Active variable gain input module (-10 to +20 dB, in 0.5 dB steps)
- Variable slope (0 to 6 dB, in 1 dB steps)
- RF power sensing

### ACTIVE FIBRE INPUT

H-IN-03

- Optical fibre input module
- AGC with settable output power level
- RF power monitoring

### PASSIVE LNB INPUT

H-IN-04

- Passive input module (0 dB gain matrix)
- 13/18V & 22kHz tone LNB powering
- RF power sensing

### ACTIVE LNB INPUT

H-IN-05

- Active variable gain input module (-10 to +20 dB, in 0.5 dB steps)
- Variable slope (0 to 6 dB, in 1 dB steps)
- LNB powering
- RF power sensing

### ACTIVE OUTPUT

H-OP-08

- Active variable gain input module (up to +30 dB)
- Variable slope
- RF power sensing

**Compact** 10U high chassis providing 128 inputs x 128 outputs with integrated LNB powering. Expandable in blocks of 8.

**Resilience** from dual redundant power supplies & dual redundant CPU modules

**Minimal training** with capacitive touchscreen controls, intuitive HMI and an improved web browser interface

**LNB Powering** 13/18V & 22kHz tone available

**Minimal downtime** in the unlikely event of a failure all active components can be hot-swapped without the need to re-boot the matrix. This includes power supplies, CPU modules, RF modules & fan trays

**850-2450 MHz** operating frequency range. Ka-band ready.

**Power savings** as only active signal routes are powered. This provides a greatly reduced power consumption compared to traditional matrices

**Temperature monitoring** with intelligent fan speed control

## Flexibility & Reliability

### Tune the matrix for optimum system performance

Harrier Rear Panel

IO (Input and Output) modules can be mixed and configured to exact earth station requirements within the same matrix.

- For distant antennas, fibre modules can be used on the inputs of the matrix
- For large antennas, passive input or output modules can be installed to provide unity gain
- For smaller antennas or weak signals, variable gain, active input modules are ideal

Impedance mismatch problems can be avoided with the option of mixed impedances on IO modules (input to input or input to output).

64 input modules and 64 output modules are installed on a fully populated 128 x 128 matrix.
